Your Quick-Start Guide For Faster, Better Inspections

Doing unit inspections the same old way exposes your business to liability & wasted time – here's how your team can adapt:

The Best Unit Inspections Are Flexible

No two inspections are ever alike, so why is your team using the same inflexible paper forms?

## Save time by making inspections more flexible:

Go Digital
Get off paper and **go digital using a mobile inspections app**

Multi-Templates
Create **multiple templates for unit inspections** so your team can choose what they need onsite – like quick safety checks or annual unit reviews

Get Specific
Tailor each inspection by detailed qualifiers (like property, region/state, season, etc.)

Flexible inspections let your team capture the right info without sacrificing speed or quality.

Must-Have Tech For Your Team's Inspection Needs

You need the right inspection tool, with the right features:

- **FAST CHANGES:** Inspection templates should be easy & quick to adjust

- **DYNAMIC INPUTS:** Inspections should automatically respond to what your team is seeing in the field – saving time, and helping capture the right information

- **AUTOMATIC FOLLOW-UPS:** When something is wrong, work should automatically be assigned to the right people for quick follow-ups

Dynamic inspections can save your team hundreds of working hours per year.

Make Your Inspection Records Work For You

Smart inspection reports go beyond storage:

Centralized

Forget rummaging through filing cabinets – your reports should be right where you need them, when you need them

Access Anywhere

You'll need to pull up inspection records from wherever you are, including onsite for staff members in the field

Analytics

Use detailed insights on inspections your team performs to make sure they're being done to your standards

Centralized inspection reports increase fast access, and prevent lost revenue from missed details.
