

# Power Your Properties with Yardi + InCheck Automation

The latest update to InCheck's Yardi integration allows your team to seamlessly share work updates between platforms.

## Value Points:

### Eliminate double entries

Tenant data is automatically synced between Yardi and InCheck, ensuring all property information always remains consistent, accurate, and up to date

### New automatic triggers for key workflows

Key dates stored in Yardi automatically trigger workflows in InCheck, so all projects are assigned to the right team, start on time and no work slips through the cracks

### View and create work orders in-app

Your team can view Yardi work orders in InCheck and create work orders that sync back to Yardi as needed

### Add inspection items to work orders

Your team can add inspection results to a Yardi work order from the InCheck mobile app, ensuring that all request categories and details carry over

InCheck + Yardi makes inspections, processes, and onsite work easier at every stage.
