

# Power Your Properties with Yardi + InCheck Automation

The latest update to InCheck's Yardi integration allows your team to seamlessly share work updates between platforms.

## Value Points:

### Eliminate Manual Double Entry

Resident data is automatically synced between Yardi and InCheck, ensuring all property information is always consistent, accurate, and up-to-date.

### Automatic Triggering For Key Work

Key dates stored in Yardi like move out or lease end can automatically trigger projects in InCheck, ensuring work starts on time and is assigned to the right people on your team - with nothing falling through the cracks.

### Get Work Order Details Anywhere

Work Orders are synced between systems so you can view details (or adjust statuses) wherever you need it - in InCheck or Yardi.

### Create Work Orders From Inspections

Easily create Work Orders that sync to Yardi during InCheck inspections. Tap to add items to one or multiple Work Orders using all your team's Yardi categories.

InCheck + Yardi makes inspections, processes, and onsite work easier at every stage.
